## SECTION I

### INTRODUCTION

#### 1. OBJECTIVES

The objectives of this analysis are to: (a) identify the critical pilot HOTAS tasks and skills which need to be improved and/or maintained when deployed, (b) define the training requirements for the device that will meet the needs of the fleet, and (c) develop a preliminary specification that functionally defines the trainer and its capabilities.

#### 2. BACKGROUND

The F/A-18 aircraft was designed with a Hands on Throttle and Stick (HOTAS) system to allow the pilot to control a wide variety of weapons, sensors and displays during critical mission phases while still maintaining flight control of the aircraft. In other words, the HOTAS concept enables the pilot to keep his hands on the power and flight controls and still perform his mission operations effectively.

The HOTAS system consists of seven controls on the flight control stick and nine controls on the throttles. These controls can be used in an almost infinite variety of combinations depending on the mode of operation in which the aircraft is configured, i.e. Navigation, Air-to-Air or Air-to-Ground. The manipulation of the HOTAS controls provides a vast array of information to the pilot on the left and right Digital Display Indicators (DDI), Horizontal Indicator (HI) and Head Up Display (HUD). Based on the pilot's interpretation of this displayed information, offensive weapon delivery and defensive electronic countermeasures (ECM) are then taken by further manipulation of the HOTAS controls.

To achieve the high level of pilot skill necessary to use the HOTAS system efficiently, extensive training and practice is required. Initial training in the operational use of the HOTAS is accomplished at the Fleet Readiness Squadron (FRS) in land based training devices such as the 15C13 HOTAS Part Task Trainer (PTT), the 2F132 F/A-18 Operational Flight Trainer (OFT), and the 2E7 Weapons Tactics Trainer (WTT). Once the pilot graduates from the FRS and is assigned to an operational squadron, he must maintain his HOTAS skills through operational

flights and, whenever possible, through the use of trainers located at centralized state-side bases. Once the pilot's squadron deploys to a remote location, however, the means to practice many of the most critical HOTAS skills are no longer available.

### 3. THE PROBLEM

The non-availability of means to maintain, and perhaps improve HOTAS skills as discussed above, has established a valid need for a deployable, shipboard trainer that can provide continuing HOTAS training during remote operational assignments. As can be seen in the preceding paragraphs, the HOTAS system requires complex perceptual, psychomotor, information processing, and decision making skills to enable the F/A-18 pilot to perform his mission effectively in an operational environment. These skills can only be maintained and improved with practice on a continuing basis.

The problem at issue in this study is to define a deployable HOTAS trainer that will meet HOTAS system training requirements and constraints in a manner that is educationally sound and in a configuration that is acceptable to the fleet. Inherent in a shipboard, deployable trainer are all the built-in constraints associated with mobility, lack of space, harsh operating environment, and limited maintenance and logistics support. Other requirements cited in the Statement of Work (SOW) are that the trainer will be used without an instructor and must, therefore, have the capability to allow the user to set conditions and initialize his practice mission, measure his performance and then provide him feedback on his performance. These constraints and requirements indicate the need for an extremely sophisticated, highly automated training device.

## SECTION II

### SYSTEM DESCRIPTION

The F/A-18 has three master modes of operation: Navigation (NAV), Air-to-Air (A/A), and Air-to-Ground A/G. The HOTAS controls (see Figure 1) are an integral part of the successful operation of the aircraft in any of the master modes in effect during the accomplishment of a mission. The HOTAS controls consist of 16 switches; seven on the flight control stick and nine on the throttle. Many of the switches have different functions depending on the master mode in effect at any given time. A brief description of the HOTAS controls follows.

#### 1. THROTTLE CONTROLS

- a. Communications Switch - Three position rocker switch. Initiates transmissions on Channels 1 or 2.
- b. Flare/Chaff Dispenser Switch - Three position momentary switch. Releases chaff or flares.
- c. Cage/Uncage Switch - Momentary pushbutton switch. In the A/A master mode, it cages or uncages the Sidewinder missile and gun sight reticle as follows:

##### (1) Sidewinder Missile Mode:

First activation - Cage setting commands the Sidewinder (AIM-9) seeker head to align itself to the aircraft boresight axis.

Second Activation - Uncage setting commands the Sidewinder seeker head to align itself with the scanning pattern of the radar line of sight.

##### (2) Gun Mode:

First Activation - Changes fixed range of 2,000 feet to 1,000, feet with a 25 milliradian diameter stadiometric reticle displayed on the HUD.

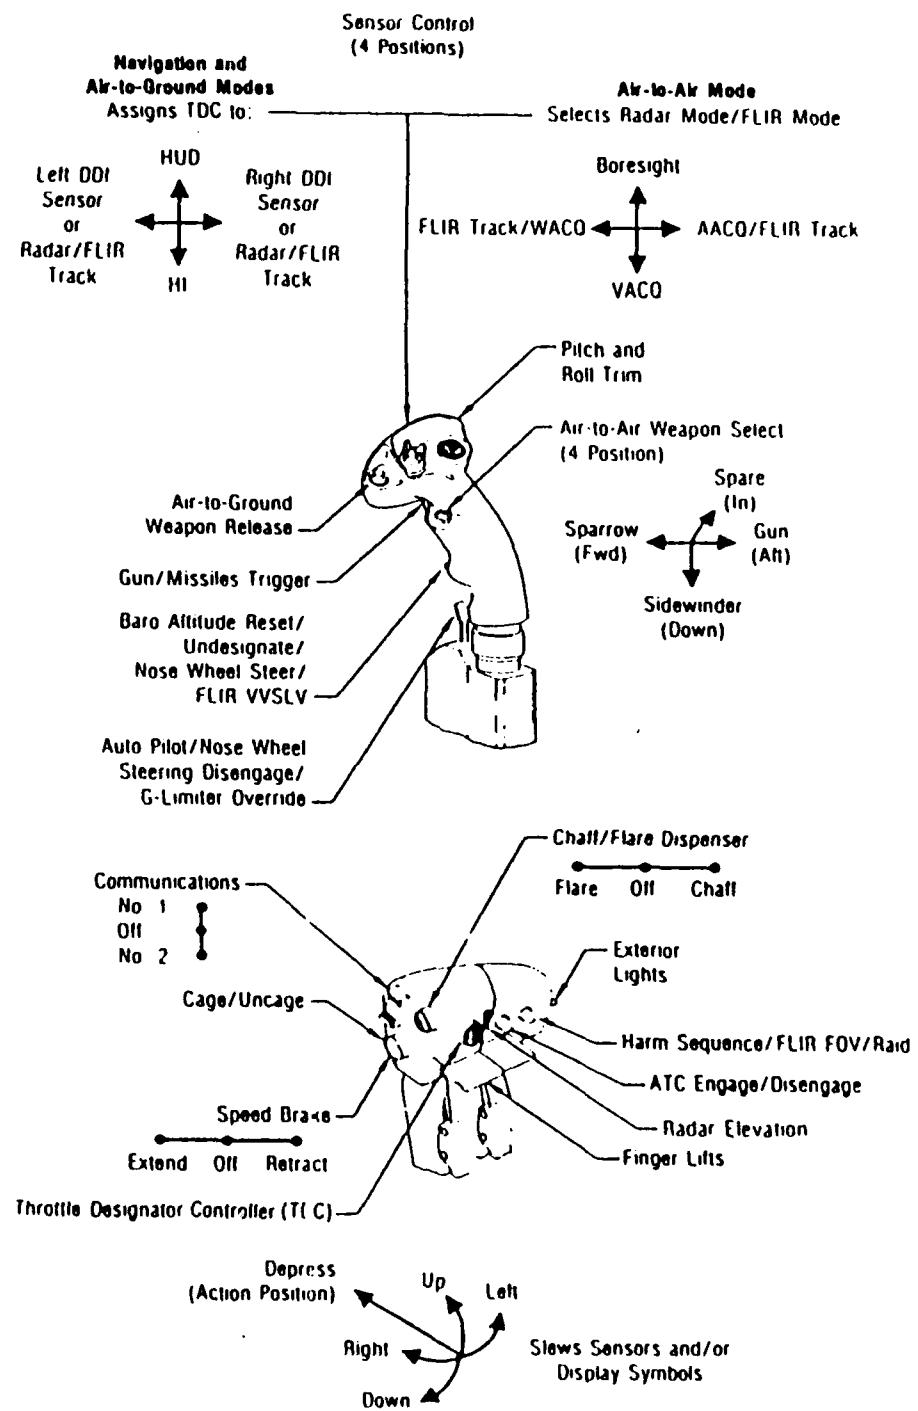

FIGURE 1 - Flight Control Stick and Throttle Switches

Second Activation - Changes range back to a fixed setting of 2,000 feet with a 12.5 milliradian diameter stadiometric reticle displayed on the HUD.

In the A/G master mode, the Cage/Uncage switch performs essentially the same functions for the Maverick and Walleye missiles and the gun as it does in the A/A mode for the AIM-9 and the gun. When in the HARM Target of Opportunity (TOO) mode, depressing the switch hands off target data to the HARM selected for firing. With a SHRIKE missile aboard, switch activation commands angle gate enable/disable. (Angle gate enable reduces the radar acquisition window but increases reflectivity in order to better discriminate among and select targets.) Finally, in the NAV master mode, the velocity vector symbol on the HUD may be caged by activation of the switch in which case flight path/pitch ladder and steering information will be displayed near the center of the HUD.

- d. Speed Brake Switch - Three position slide switch. Extends or retracts the speed brake:
  - Extend (aft position) - Extends speed brake.
  - Off (center position) - Inactivates speed brake.
  - Retract (forward position) - retracts speed brake.
- e. Throttle Designator Control (TDC) - Four way force transducer with push button switch. Provides x and y outputs for the display cursor and/or sensor control. The push button is used for target designation and sensor control functions.
- f. Automatic Throttle Control (ATC) Switch - Momentary pushbutton switch interfaced with the Flight Control System (FCS). Alternate depressions of the switch engage or disengage the automatic throttle control. When the ATC is engaged while in the landing configuration, the FCS adjusts power to maintain constant AOA. When the ATC is engaged while not in the landing configuration, the FCS adjusts power to maintain constant true air speed.
- g. HARM Sequence/FLIR FOV/Raid Switch - Momentary pushbutton switch interfaced with the Stores Management Set. Operation is as follows:

- (1) HARM Sequence - In all master modes, when HARM is in the Self-Protect Pullback and A/G modes, and when HARM is in the TOO or Self Protect mode, depressing and releasing the pushbutton sequences through available targets. In the Self Protect mode, the sequence is from the highest to the lowest priority target. In the A/G and NAV modes, with HARM in the TOO monitor mode (HARM not the selected weapon), the TDC must be assigned to the HARM format for the HARM sequence to operate.
- (2) FLIR FOV - In the A/G and NAV modes, when the FLIR is in operation and the switch is not dedicated to HARM, depressing and releasing the button toggles the field of view (FOV) between wide and narrow.
- (3) RAID - In the A/A mode (and in the NAV mode when the TDC is assigned to the A/A radar) with the radar operating in Single Target Track (STT), or Track While Scan (TWS), and HARM is not in Self Protect Pullback, depressing and releasing the pushbutton commands the radar from STT or TWS to the RAID mode. Depressing and releasing it again commands the radar to STT.
  - h. Exterior Light Switch - Two position switch. Turns exterior lights on and off
  - i. Radar Elevation Switch - Potentiometer. Raises and lowers radar antenna's spatial coverage.

## 2. FLIGHT CONTROL STICK CONTROLS

- a. A/G Weapon Release Switch - Momentary pushbutton switch. Commands weapon release and, if the Video Tape Recording System (VTRS) is on board and activated via the Camera Video Tape Panel controls, the HUD imagery or raster video from the left or right DDI and the headset audio will be recorded.
- b. A/A Weapon Release Switch - Four position toggle and pushbutton switch. Selects A/A weapons (Sparrow, Sidewinder or gun) and places the Weapon System in the A/A master mode.
- c. Gun/Missile Trigger Switch - Two detent switch. Fires gun and Sparrow and Sidewinder missiles.

- d. Sensor Control Switch - Four position momentary switch. Function depends on which of its two modes of operation (NAV-A/G and A/A) are in effect. Functions include assigning TDC priority to sensors and weapons; assigning the TDC to the HUD and the HI; placing the radar in various modes of operation; and commanding FLIR to track or break track.
- e. Trim Switch - Four position momentary switch. Adjusts aircraft pitch and roll trim.
- f. Undesignate/Nose Wheel Steering Switch - Momentary pushbutton switch. Undesignates all designated targets; commands radar and FLIR to break lock if tracking targets; changes radar modes; and engages nose wheel steering in weight-on-wheels condition.
- g. Autopilot/NWS Disengage Switch - Momentary paddle switch. In weight-on-wheels state (aircraft on the ground), it disengages the autopilot or overrides G-limiter. In weight-off-wheels condition (aircraft in flight), it disengages nose wheel steering.

## SECTION III

### TECHNICAL APPROACH

#### 1. OVERVIEW

This report summarizes the results of two of the three major tasks involved in developing a functional specification for a deployable HOTAS trainer. A brief outline of project tasks is as follows:

- I. Develop task listing
  - A. Collect and Review HOTAS Documentation
  - B. Develop Trainer Task Listing
  - C. Prepare Task Listing Report
- II. Identify trainer requirements
  - A. Administer HOTAS Questionnaire
  - B. Develop Trainer Task Description Matrix
  - C. Identify Trainer Requirements
  - D. Prepare Requirements Analysis Report
- III. Prepare Deployable HOTAS Trainer Functional Specification

This report marks the completion of the second phase of the analysis. The remainder of the effort will be devoted to the preparation of the Functional Specification. A more detailed discussion of the tasks accomplished thus far is presented below.

#### 2. DEVELOP TASK LISTING

##### a. Collect and Review HOTAS Documentation

In order to identify and define the requirements for the deployable HOTAS trainer, as many appropriate F/A-18 documents as possible were collected for review. Included were NATOPS and flight manuals, military characteristics reports and engineering specifications for similar, existing devices, and various HOTAS study and MCAIR system reports. A complete list of the documents reviewed can be found in the bibliography located at the end of this report.

The available F/A-18 HOTAS data was reviewed to identify the functions performed by the HOTAS controls and their relationship with the cockpit displays. It was found that the controls perform a multiplicity of functions and that the functions vary depending on which master mode (A/A, A/G, NAV) is in operation. This data was analyzed and used as the basis for developing the task listing and trainer requirements data.

b. Develop Trainer Task Listing

Although many of the documents discussed above provided usable information for the development of the trainer task listing, the primary resource for this task was the current issue of the "Objectives Hierarchy Report" developed for the F/A-18 Instructional System Development program being used at the three F/A-18 training squadrons. Since the HOTAS System was the object of the analysis, the effort was limited to identifying only those tasks associated with the three primary phases of a tactical mission i.e. air-to-air, air-to-ground, and tactical defense; routine flight and housekeeping operations were not considered.

An overall listing of all HOTAS tasks performed in the three master modes was compiled. This task listing represents an overall description of the pilot's job on a tactical mission. Based on the documentation available and preliminary analysis of data from a questionnaire administered to fleet personnel, (see below), those tasks with a comparative low priority were identified for possible future elimination from further consideration as tasks for training on a deployable HOTAS trainer.

c. Prepare Task Listing Report

The task listing discussed above was integrated into a formal report which was submitted as a deliverable to NTSC.

3. IDENTIFY TRAINER REQUIREMENTS

a. Administer HOTAS Questionnaire

The basic approach taken to determine the capabilities and functions that should be incorporated into the HOTAS deployable trainer was to survey the potential fleet users of the device in order to obtain their expert judgments. The objective of the survey was to determine what features should be included in the trainer to enable fleet personnel to maintain their HOTAS skills while deployed. A questionnaire was developed through a combined effort by NTSC and EER Systems, which concentrated on the complexity,

difficulty, criticality, and frequency of pilot tasks requiring the use of the seven control stick and nine throttle switches of the HOTAS while under the various master modes of tactical operation. A draft of the questionnaire was sent to the F/A-18 Fleet Project Team (FPT) for review and comment. Following receipt of FPT comments, the questionnaire was modified to accommodate FPT recommendations and prepared for administration. A copy of the questionnaire is presented in Appendix A.

The questionnaire was administered at two locations: NAS Lemoore and NAS Cecil Field. Unforeseen circumstances at NAS Lemoore resulted in an extremely small sample of only four pilots to fill out the questionnaire. Following completion of the questionnaires, an informal discussion was held with the pilots to pick up any additional requirements that might be appropriate. The same procedure was followed at Cecil Field where an additional 16 questionnaires were completed for a total of 20. While this was not as large a sample population as was desired, the consistency of responses was sufficiently high to indicate valid data. A summary of response data can be found in Appendix B.

#### b. Develop a Trainer Task Description Matrix

The Trainer Task Description Matrix was developed to provide additional information for the identification of the training capabilities requirements for the HOTAS Deployable Trainer. The approach used in the development of the matrix was to take the task listing previously completed, add a number of subtasks gleaned from documentation not available previously, and assign to each task/subtask, the conditions under which it would be performed. The cockpit controls, displays and indicators required to accomplish each task were then identified and added to the matrix as were the simulation requirements for each task or group of tasks. The final item in the matrix is a level of priority (three tier) for incorporating the simulation requirements into the trainer. The priorities were assigned on the basis of the information found in the reference documentation, and in the questionnaire and interview data obtained from the F/A-18 pilots. The Trainer Task Description Matrix, together with the HOTAS Task Questionnaire data, will provide the basic data for preparation of the HOTAS Deployable Trainer Preliminary Functional Specification. The Trainer Task Description Matrix is presented in Appendix C

c. Identify HOTAS Trainer Requirements

The responses to the questionnaires were combined into simple means, totals and percentages and summarized as presented in Appendix B. This summary data was analyzed and integrated with the information resulting from the informal discussions held with F/A-18 pilots and with the data tabulated on the Trainer Task Description Matrix. This analysis resulted in a set of prioritized requirements for the functions, controls and displays that should be incorporated into a deployable HOTAS trainer. They will provide the basis for developing the final deliverable of this project i.e. the functional specification for the deployable HOTAS trainer. The requirements are cited in the Recommendations and Conclusions section of this report.

d. Prepare the Requirements Analysis Report

This task was directed to the preparation of this Requirements Analysis Report which is submitted as a contract deliverable.

4. PREPARE DEPLOYABLE HOTAS TRAINER FUNCTIONAL SPECIFICATION

This effort will be the final deliverable of CDRL Item A003 of the N-v-M contract. When completed, it will provide a functional description of a deployable HOTAS trainer in sufficient detail to enable engineering personnel to use it as the basis for developing a detailed engineering specification for the device. As stated above, the functional description will be based on the requirements data developed during the earlier phases of this task.

## SECTION IV

### FINDINGS

This section presents the findings that resulted from the administration of the HOTAS Task Questionnaire shown in Appendix A. These findings are based on the responses of the pilots who completed the questionnaire as summarized in the data shown in Appendix B, Parts II and III. All responses are listed in rank order according to the responses. The percentages cited reflect the number of pilots responding to a specific item versus the total number of pilots surveyed.

1. Of the three Master Modes, the Air-to-Air Mode is considered the most difficult (53%) and complex (65%) to operate. The Air-to-Ground Mode is considered somewhat less difficult (42%) and complex (35%) while the Navigation Mode is considered neither difficult (5%) nor complex (0%) to operate. (Questions 1 and 2)
2. The HOTAS controls which are considered the most important (Question 3):

#### Throttle

#### Control Stick

Throttle Designator Cont.	90%	A/A Weapon Select Switch	70%
Radar Elevation Switch	30%	Sensor Control Switch	50%
HARM Seq./FLIR FOV/Raid Sw.	20%	Gun/Missiles Trigger	40%
Chaff/Flare Dispenser Sw.	20%	A/G Weapon Release Sw.	25%

3. The HOTAS controls which require the most practice to maintain proficiency (Question 4):

#### Throttle

#### Control Stick

Throttle Designator Cont.	90%	Sensor Control Switch	70%
Radar Elevation Switch	65%	A/A Weapon Select Switch	50%
Chaff/Flare Dispenser Sw.	45%		
HARM Seq./FLIR FOV/Raid Sw.	30%		
Cage/Uncage Switch	25%		

4. The HOTAS controls which are the most difficult to set up correctly (Question 5)

AIR-TO-AIR MODE

<u>Throttle</u>	<u>Control Switch</u>	
Throttle Designator Cont.	72%	Sensor Control Switch
Radar Elevation Switch	55%	A/A Weapon Select Sw.
Chaff/Flare Dispenser Sw.	33%	Gun/Missile Switch
HARM Seq./FLIR FOV/Raid Sw.	17%	
Cage/Uncage Switch	22%	

AIR-TO-GROUND MODE

<u>Throttle</u>	<u>Control Stick</u>	
HARM Seq./FLIR FOV/Raid Sw.	67%	Sensor Control Switch
Throttle Designator Cont.	61%	A/G Weap. Rel. Switch
Chaff/Flare Dispenser Sw.	28%	Gun/Missile Trigger
Radar Elevation Switch	17%	
Cage/Uncage Switch	11%	

5. The responses to questions 6 through 12 of the questionnaire were consistent with the responses shown above and provided reinforcement to their validity. A breakdown of specific response data for these items can be found in Appendix B.
6. In an EW environment, the Chaff/Flare Dispenser Switch is considered the most critical control and the Radar Warning Receiver (RWR/ALR-67) with the HUD are considered the most critical displays (Question 13). Complete data for these and less critical controls and displays is shown in Appendix B.
7. The frequency of use of the Air-to-Air Radar Modes (Question 14):

Always Used

Range While Search (RWS)	85%
Single Target Track (STT)	85%
Non-Cooperative Target Recognition (NCTR)	60%
Electronic Counter-Counter Measures (ECCM)	50%
Auto Acquisition (AACQ)	50%

Sometimes Used

Track While Scan (TWS)	75%
Vertical Acquisition (VACQ)	65%
Gun Acquisition (GACQ)	65%
Raid	50%

Rarely Used

Velocity Search (VS) 85%

8. The frequency of use of FLIR when integrated with the Air-to-Air radar modes (Question 15). Note: Four of the pilot responders indicated that they had never used FLIR so the percentages cited reflect only the responses of the 16 pilots with FLIR experience.

Always Used

Velocity Vector Slaved (VVSLV)	50%
Radar LOS Slaved (RRSLV)	50%
FLIR Autotrack	44%

Sometimes Used

Velocity Vector Slaved (VVSLV)	50%
Radar LOS Slaved (RRSLV)	50%
FLIR Autotrack	50%

Rarely Used

Inertial LOS Slaved	69%
Radar Offset LOS Slaved	56%

9. The frequency of use of the Air-to-Ground Radar Modes (Question 16):

Always Used

Doppler Beam Sharpened Patch (EXP2)	65%
Air-to-Ground Ranging (AGR)	65%
Real Beam Ground Map (MAP)	50%

Sometimes Used

Ground Moving Target (GMT)	60%
Sea Surface Search (SEA)	53%
Doppler Beam Sharpened Sector (EXP1)	50%
Medium Resolution Synthetic Aperture (EXP3)	50%

Rarely Used

Terrain Avoidance (TA)	95%
Precision Velocity Update (PVU)	55%

10. Pilot skills most likely to deteriorate with lack of practice (Question 17):

Throttle Designator Control operations	50%
A/A, A/G and general FLIR operations	45%
A/A targeting, radar setups	40%
HARM/SHRIKE/WALLEYE delivery	35%
Use of the Radar Elevation Switch	30%
Use of the Weapon Select Switch	20%
Use of the Chaff/Flare Dispenser Switch	20%

11. The capabilities that should be required of a deployable HOTAS trainer (Question 18):

HARM/WALLEYE delivery	70%
A/A targeting/radar sorting	40%
A/A missions against all types of bogeys	35%
FLIR sequences	25%
A/G weapons sequences/maneuvers	25%

## SECTION V

### CONCLUSIONS

The following conclusions and supporting rationale, relative to the development of a deployable HOTAS trainer, were drawn following review and analysis of the information extracted from relevant F/A-18 documentation, pilot interviews, HOTAS Task Questionnaires, and the Trainer Task Description Matrix.

#### 1. GENERAL

- a. Flight characteristics of the HOTAS deployable trainer should simulate the F/A-18C aircraft to the highest degree possible.
- b. Suitable scenarios will be required for both Air-to-Air and Air-to-Ground Master Mode simulation. Training in Air-to-air tactics, both offensive and defensive, is considered the most important requirement for simulation followed closely by offensive and defensive Air-to-ground tactics.
- c. Requirements for simulated gaming areas should include:
  - (1) Air-to-Air visual and radar environments which include varying types and numbers of adversary aircraft as well as incoming enemy heat-seeking and radar guided missiles.
  - (2) Air-to-Ground visual and radar geographical areas which include various tactical targets as well as active emitting and/or shooting AAA and SAM sites.
- d. FLIR operation should be considered a high priority function to be simulated since fleet pilots get very little opportunity to practice its use. While FLIR is used primarily for day or night detection in the A/G Mode, it also has limited application in the A/A Mode which pilots expressed a need to have simulated.

- e. Mixed scenarios that require the pilot to make rapid change-overs between Master Modes must be included in the software for the HOTAS trainer to provide the realistic simulation of actual combat situations. During the performance of many missions, the pilot may be required to make such mode changes to accommodate to changing tactical situations. For example, while flying an A/G mission in the A/G Mode, the pilot might encounter hostile aircraft. This will require an immediate switch to the A/A Mode to engage the threat, after which a switch back to the A/G Mode must be made for weapons delivery on the ground target.
- f. The following HOTAS controls should be functionally simulated for the F/A-18 A/A and A/G Master Modes

<u>Throttle</u>	<u>Control Stick</u>
Throttle Designator Control Switch	A/A Weapon Select
Radar Elevation Switch	Sensor Control Switch
HARM Seq./FLIR FOV/Raid Switch	Gun/Missiles Trigger
Chaff/Fare Dispenser Switch	A/G Weapon Release
Switch	
Cage/Uncage Switch	

The NAV Master Mode is not included above because it was considered neither difficult nor complex by the pilots surveyed and was, therefore, given no priority for simulation.

- g. The following HOTAS controls have insufficient supporting data to justify a requirement that they be functionally active:

<u>Throttle</u>	<u>Control Stick</u>
Communications Switch	Trim Switch (see note)
Speed Brake	Baro./Alt./Reset Switch
Automatic Throttle Control (ATC)	Auto Pilot/NWS Switch
Exterior Lights	

Note: Addition of a trim switch might be desirable if the fidelity of the F/A-18 flight characteristics is extremely high.

- h. In addition to the required HOTAS controls cited above, the following controls, displays and indicators must be simulated to accomplish the desired training:
  - (1) Left and right DDIs with surrounding function pushbuttons
  - (2) ALR-67 Azimuth and Control Indicators
  - (3) Head Up Display (HUD)
  - (4) Horizontal Indicator (HI)
  - (5) Master Arm Panel
  - (6) ECM Control Panel
  - (7) Sensor Control Panel
  - (8) Shoot Cue
  - (9) Selected displays/controls/functions on the Upfront Control Panel
  - (10) Selected displays/controls/functions on the Integrated Fuel/Engine Indicator Panel
  - (11) Related, integrated HUD, Radar, Stores, Format, FLIR, HARM, Navigation, and ALR-67 displays and aural tones.
- i. The Throttle Designator Controller (TDC) is the single most important HOTAS control. It is used to perform a multitude of functions in conjunction with other controls and displays, e.g. select radar modes and parameters, control radar operation, control cursor operation in various DDI displays, etc. The capability to simulate many of these interacting functions should be incorporated in the HOTAS trainer.
- j. In order to include further operational realism into the trainer, the capability to degrade the performance of the HARM, FLIR, ALR-67, and other selected avionics systems should be incorporated into the software. The type and extent of degraded performance should be consistent with the emergency procedures cited in the NATOPS manual and with appropriate maintenance records.
- k. In order to provide performance feedback for self evaluation, one or more of the following performance measures should be included in the HOTAS deployable trainer capabilities:
  - (1) A scoring system based on kill, no-kill, and miss distance performance
  - (2) A scoring system based on procedural accuracy
  - (3) Negative scoring for missed opportunities

## 2. AIR-TO-AIR OPERATIONS

- a. To provide training in long range, (i.e. beyond visual) target acquisition in the Air-to-Air Master Mode, the APG-65 Multipurpose A/A, A/G Terrain Avoidance Radar System needs to be simulated. In the A/A Master Mode, the radar has the capability to operate in approximately 11 separate radar modes. At a minimum, the Range While Search (RWS) and Single Target Track (STT) should be simulated. Non-Cooperative Target Recognition (NCTR) is a sub-mode of the STT radar mode and should also be considered for simulation. Radar simulation is also required to provide pulse doppler illumination for firing the AIM-7 missile. Finally, while of a low priority, the Gun Acquisition (GACQ) mode should be simulated if the Vulcan 20 mm gun is included in the HOTAS trainer's weapons inventory.

## 3. AIR-TO-GROUND OPERATIONS

- a. As in the case of the Air-to-Air Master Mode, in order to provide long range acquisition of targets in the Air-to-Ground Master Mode, the A/G radar must be simulated. This radar has the capability to operate in nine separate modes, however, only three of these modes seem to be used extensively, i.e. the Real Beam Ground Map (MAP), the Doppler Beam Sharpened Patch (EXP2), and the Air-to-Ground Ranging (AGR) modes. These three radar modes should be simulated.
- b. There is a high priority requirement for simulation of HARM missile delivery as both an offensive and defensive weapon, although it is used primarily as an A/G offensive missile. As is the case with FLIR, fleet pilots get little opportunity to practice delivery techniques for this particular weapon.
- c. As stated above, FLIR should be included as an air-to-ground simulation capability.

## 4. DEFENSIVE OPERATIONS

- a. There is a high priority requirement for the simulation and integration of defensive tactics into both A/A and A/G missions. Scenarios for defensive operations will be required for both types of mission. This defensive capability will

require an A/A environment that includes both simulated adversary aircraft firing heat-seeking and radar guided missiles as well as incoming AAA and SAM missiles fired from the ground. Also required will be an A/G environment with a variety of tactical targets as well as AAA and SAM sites that emit radar signals and fire weapons at the F/A-18.

- b. To provide a defensive tactics training capability, the Chaff/Flare Dispenser Switch and its related functions will have to be simulated. In addition, there will be a requirement for the ALR-67 Radar Warning Receiver with its associated controls and display indicators.

## SECTION VI

### RECOMMENDATIONS FOR THE GENERIC N-V-M TRAINER

1. Top Priority - Ensure that the air-to-air offensive and defensive tactical capabilities of the generic trainer now being developed are acceptable and can be converted to F/A-18C operations with a minimum of effort when the HOTAS controls are integrated
2. Second priority - Improve the existing N-v-M displays by converting them to representations of actual F/A-18C displays.
3. Third priority - To the extent possible, add an air-to-ground capability to the generic N-V-M trainer.

TOO	Target of Opportunity
TWS	Track While Scan
UFC	Up Front Control
VACQ	Vertical Acquisition
VMC	Visual Meteorological Condition
VTRS	Video Tape Recording System
VVSLV	Velocity Vector Slaved

**APPENDIX A**

**HOTAS TASK QUESTIONNAIRE**

## HOTAS TASK QUESTIONNAIRE

### Introduction

The Naval Training Systems Center has been tasked to develop a deployable Hands on Throttle and Stick Part Task Trainer (HOTAS PTT) for the F/A-18 aircraft. This system will provide training and proficiency maintenance on those critical HOTAS skills that degrade during lengthy carrier deployments due to lack of practice. This trainer is not being designed to reduce your flight time in the aircraft. It is being developed as a device that will provide training and practice in areas that, for one reason or another, are not available on operational equipment (e.g., EW, HARM).

The first step in the development of the HOTAS PTT is to determine those critical skills that require the most practice to remain proficient in operating the F/A-18 HOTAS system. We request your assistance in providing this information because you are the experts with the F/A-18. You know the required tasks and their criticality. Therefore, we need your input at this early stage of development of the trainer so that it will provide the maximum benefit to you.

There are no right or wrong answers to any of these questions. This is not a test and you are not being evaluated. Your answers will remain strictly confidential. Please take the time to be as accurate as possible.

After we have analyzed this information, we will provide you with a detailed summary report of the results. These results are extremely important as they will help to determine the direction that the HOTAS PTT development will take. We will provide you with regular progress reports, and we hope that you will be able to provide hands on assistance with this trainer in the future. Your cooperation is greatly appreciated. Please call us if you have any questions or comments about this project. Thank you.

## BACKGROUND INFORMATION

Please provide the following information:

RANK: \_\_\_\_\_ DATE: \_\_\_\_\_

SQUADRON: \_\_\_\_\_ AGE: \_\_\_\_\_

Type of aircraft you are currently flying: \_\_\_\_\_

Approximate total flight hours: \_\_\_\_\_

Total flight hours by aircraft type:

Aircraft Type	Hours
_____	_____
_____	_____
_____	_____
_____	_____

Total flight hours in the last six months:

Aircraft Type	Hours
_____	_____
_____	_____
_____	_____
_____	_____

Total simulator hours on the 15C13 (PTT) and 2E7 (WTT):

Simulator Type	Hours
15C13	_____
2E7	_____

## HOTAS QUESTIONNAIRE

The following questions are all related to the effective use of the operational F/A-18 HOTAS controls and their associated displays in accomplishing a mission.

1. The F/A-18 HOTAS system has three Master Modes of operation: Air-to-Air (A/A), Air-to-Ground (A/G), and Navigation (NAV). Circle the letter of the mode that causes you to have the greatest difficulty using the HOTAS controls correctly?
  - A. A/A mode
  - B. NAV mode
  - C. A/G mode
  
2. Circle the letter corresponding to Master Mode that involves the most complex HOTAS operations.
  - A. A/A mode
  - B. NAV mode
  - C. A/G mode

PLEASE REFER TO THIS LIST OF HOTAS CONTROLS AS REQUIRED TO ANSWER THE FOLLOWING QUESTIONS.

### HOTAS CONTROLS

A. Chaff/Flare Dispenser	I. Radar Elevation
B. Communication	J. Air-to-Air Weapon Select
C. Cage/Uncage	K. Pitch and Roll Trim
D. Speed Brake	L. Sensor Control ( <i>Castle switch</i> )
E. Throttle Designator Controller (TDC)	P. Air-to-Ground Weapon Release
F. Automatic Throttle Control (ATC)	Q. Gun/Missile Trigger
G. HARM Sequence/FLIR FOV/RAID	R. Barometric Altitude Reset/Undesignate/NWS
H. Exterior Lights	S. Autopilot/NWS disengage/G-limiter Override

3. Please indicate the four HOTAS controls/modes that are the most important by entering the corresponding letters from the list above.

1. \_\_\_\_ 2. \_\_\_\_ 3. \_\_\_\_ 4. \_\_\_\_

4. Please list the four HOTAS controls that require the most practice to be used correctly.

1. \_\_\_\_ 2. \_\_\_\_ 3. \_\_\_\_ 4. \_\_\_\_

5. Please indicate which combination of HOTAS controls and/or modes are the most difficult to correctly set up (e.g., setting up the controls/displays so that you may lock on and fire a Sparrow missile). Do this by entering an X for each affected switch for each mode. Switches which are not used leave blank.

**THROTTLES**

	: NAV :	A/A :	A/G :	EW:

15. Barometric Altitude Reset/Undesignate/NWS

DIFFICULTY: \_\_\_\_\_ FREQUENCY: \_\_\_\_\_ PRACTICE: \_\_\_\_\_

16. Autopilot/NWS Disengage/G-Limiter Override

DIFFICULTY: \_\_\_\_\_ FREQUENCY: \_\_\_\_\_ PRACTICE: \_\_\_\_\_

6. Which combination of HOTAS controls do you need to set up the fastest? Under what situation?

---

---

---

7. Once set up, which combination or combinations of HOTAS controls presents the biggest challenge to use correctly?

---

---

---

8. What HOTAS pilot skills are the most likely to deteriorate without practicing?

---

---

---

9. What, if any, situations occur in which the HOTAS controls are commonly set up incorrectly? Please enter the combination of HOTAS controls that may be set up incorrectly?

---

---

---

10. Which of the HOTAS controls require continuing practice to maintain proficiency? Indicate from 1 to 9 for each mode, with "1" requiring the most practice.

THROTTLES

	: NAV :	A/A :	A/G :	EW:
1. Chaff/Flare Dispenser	:	:	:	:
2. Communications	:	:	:	:
3. Cage/Uncage	:	:	:	:
4. Speed Brake	:	:	:	:
5. Throttle Designator Control (TDC)	:	:	:	:
6. Automatic Throttle Control (ATC)	:	:	:	:
7. HARM Sequence/FLIRFOV/RAID	:	:	:	:
8. Exterior Lights	:	:	:	:
9. Radar Elevation	:	:	:	:

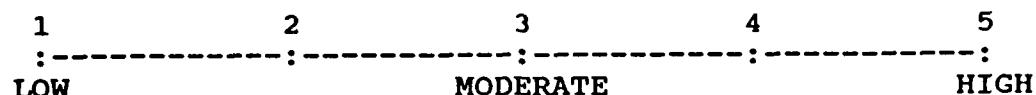

CONTROL STICK

	: NAV :	A/A :	A/G :	EW:
1. Air-to-Air Weapon Select	:	:	:	:
2. Pitch and Roll Trim	:	:	:	:
3. Sensor Control	:	:	:	:
4. A/G Weapon Release	:	:	:	:
5. Guns/Missiles Trigger	:	:	:	:
6. Baro Alt. Reset/Undesignate/NWS	:	:	:	:
7. Auto Pilot/NWS Disengage/G-limits Override	:	:	:	:

11. Assume that you are in the Air-to-Air Master Mode. For each HOTAS control listed below, please enter the difficulty in using the control, how often you would use it during an average mission, and how much practice is required to maintain your proficiency with it. Use the scale provided to make your ratings. Enter an "X" if a switch is not used

in this mode. For example, if you believe that using the throttle designator controller (TDC) is very difficult, you would place a "5" in the space provided. If you use it moderately frequently during a mission, you would enter a "3", and if you believe that the TDC requires little practice to maintain proficiency, enter a "1".

Rating Scale

1. Chaff/Flare Dispenser

DIFFICULTY: \_\_\_\_\_ FREQUENCY: \_\_\_\_\_ PRACTICE: \_\_\_\_\_

2. Communication

DIFFICULTY: \_\_\_\_\_ FREQUENCY: \_\_\_\_\_ PRACTICE: \_\_\_\_\_

3. Cage/Uncage

DIFFICULTY: \_\_\_\_\_ FREQUENCY: \_\_\_\_\_ PRACTICE: \_\_\_\_\_

4. Speed Brake

DIFFICULTY: \_\_\_\_\_ FREQUENCY: \_\_\_\_\_ PRACTICE: \_\_\_\_\_

5. Throttle Designator Controller (TDC)

DIFFICULTY: \_\_\_\_\_ FREQUENCY: \_\_\_\_\_ PRACTICE: \_\_\_\_\_

6. Automatic Throttle Control (ATC)

DIFFICULTY: \_\_\_\_\_ FREQUENCY: \_\_\_\_\_ PRACTICE: \_\_\_\_\_

7. HARM Sequence/FLIR FOV/RAID

DIFFICULTY: \_\_\_\_\_ FREQUENCY: \_\_\_\_\_ PRACTICE: \_\_\_\_\_

12. Assume that you are in the Air-to-Ground Master Mode. For each HOTAS control listed below, please follow the same instructions that you did in question number 11, but remember to rate the HOTAS controls as if you were in Air-to-Ground mode.

Rating Scale

1	2	3	4	5
-----	-----	-----	-----	-----
LOW		MODERATE		HIGH

1. Chaff/Flare Dispenser

DIFFICULTY: \_\_\_\_\_ FREQUENCY: \_\_\_\_\_ PRACTICE: \_\_\_\_\_

- D. Inertial LOS Slaved: \_\_\_\_\_
- E. FLIR Autotrack: \_\_\_\_\_

Please enter any comments:

---

---

---

---

16. The following radar modes are available for use in A/G weapon delivery. In the space provided for each mode, enter a "1" if it is always used, enter a "2" if it is sometimes used, or enter a "3" if the radar mode is rarely used during a operational mission.

Rating Scale

1	2	3
-----	-----	-----
always used	sometimes used	rarely used

- A. Real Beam Ground Map (MAP): \_\_\_\_\_
- B. Sea Surface Search (SEA): \_\_\_\_\_
- C. Ground Moving Target (GMT): \_\_\_\_\_
- D. Doppler Beam Sharpened Sector (EXP1): \_\_\_\_\_
- E. Doppler Beam Sharpened Patch (EXP2): \_\_\_\_\_
- F. Medium Resolution Synthetic Aperture (EXP3): \_\_\_\_\_
- G. Precision Velocity Update (PVU): \_\_\_\_\_
- H. Air-to-Ground Ranging (AGU): \_\_\_\_\_
- I. Terrain Avoidance (TA): \_\_\_\_\_

Please enter any comments:

---

---

---

---

17. Please list the pilot HOTAS skills that may deteriorate due to lack of application or practice.

1. \_\_\_\_\_ 5. \_\_\_\_\_  
2. \_\_\_\_\_ 6. \_\_\_\_\_  
3. \_\_\_\_\_ 7. \_\_\_\_\_  
4. \_\_\_\_\_ 8. \_\_\_\_\_

18. Assume that a HOTAS PART TASK TRAINER is deployed on ship and available for your use. It takes up little space and no instructor is required. What HOTAS functions (e.g., weapon systems, mission scenarios, HARM, etc.) would be required on this trainer in order for you to maintain and/or develop the necessary skills to successfully perform A/A, A/G, and EW missions?

---

---

---

---

19. Would a trainer similar in concept and capability to DEVICE 15C13 (F/A-18 PTT) be an acceptable deployed trainer if it was converted to a compact form? Why or why not?

---

---

---

---

20. What is the most difficult mission scenario that you must accomplish, and why is it difficult?

---

---

---

---

21. Please enter any additional comments below that you have about the development of a deployable HOTAS part-task trainer (suggestions, complaints, etc.). Remember, this trainer is to be capable of assisting you in maintaining your HOTAS skills when deployed.

In the 2E7	42.9	10	150

## PART II

## QUESTIONNAIRE DATA SUMMARY

## RESPONSE TOTALS AND MEANS

This part of the data summary is a compilation of the most frequent responses given in the questionnaire. Responses are listed either in the order of their frequency or, where ratings were called for, the average rating score. The frequency or rating average is shown after each response.

## 1. Master Modes causing greatest difficulty

## 2. Master Modes considered most complex

### 3. HOTAS controls/modes considered most important

a.	Throttle Designator Controller (TDC)	18
b.	Air-to-Air Weapon Select	14
c.	Sensor Control	10
d.	Gun/Missile Trigger	8
e.	Chaff/Flare Dispenser	4
f.	HARM Seq./FLIR FOV/Raid	4
g.	A/G Weapon Release	4
h.	Communications	4

#### 4. HOTAS controls requiring most practice

a.	Throttle Designator Control (TDC)	18
b.	Sensor Control	14
c.	Radar Elevation	13
d.	Air-to-Air Weapon Select	10
e.	Chaff/Flare Dispenser	9
f.	HARM seq./FLIR FOV/Raid	6
g.	Cage/Uncage	5

5. Controls/modes most difficult to set correctly

<u>NAV Mode</u>		<u>A/A Mode</u>	
a. TDC	4	a. TDC	13
b. Chaff/Flare Disp.	2	b. Radar Elevation	10
c. HARM Sequence	2	c. Sensor Control	7
		d. Chaff/Flare Disp.	5
		e. Cage/Uncage	4
		f. A/A Weapon Select	4

<u>A/G Mode</u>		<u>EW Mode</u>	
a. HARM Sequence	12	a. Chaff/Flare Disp.	5
b. TDC	11	b. HARM Seq./FLIR/Raid	5
c. Sensor Control	7	c. TDC	4
d. Chaff/Flare Disp.	6	d. Cage/Uncage	3

Ranking Over All Modes

a. TDC	32	e. Radar Elevation	10
b. HARM Sequence	19	f. Cage/Uncage	7
c. Chaff/Flare Disp.	18	g. A/A Weapon Select	4
d. Sensor Control	14		

6. Controls requiring fastest setup

a. A/A weapon selection, radar setups, delivery	18
b. Changing back and forth from A/A to A/G Modes	4
c. Chaff/Flare Dispenser	3
d. HARM delivery sequence	2
d. TDC/Radar Elevation operation in A/A Mode	2

7. Biggest challenge to use correctly once set up

a. TDC in both A/A and A/G Master Modes	6
b. A/G weapon delivery (auto delivery, HARM sequence, getting weapon on highest priority target, etc.)	4
c. A/A weapon selection, radar setting, delivery	2

8. Skills most perishable without practice

a. A/A weapon select, radar sorting, acquisition, targeting and delivery	14
b. TDC Sequences	5
c. HARM sequences/delivery	5
d. A/G weapon delivery switching	2
e. FLIR bombing	2

9. Control setups most likely to be done incorrectly

a. No response	7
b. A/G weapon delivery	6
c. A/A radar modes, elevation selection, sensor control	4
d. TDC operations	3
e. Use of Raid switch	2

10. Controls requiring continuous practice to maintain proficiency (Scale of 1 = most to 9 = least)

NAV Mode

a. TDC	4.6
b. HARM Sequence	4.6
c. Chaff/Flare Disp.	5.4
d. Baro. Altimeter	6.1
e. Radar Elevation	6.2

A/A Mode

a. TDC	2.7
b. Chaff/Flare Disp.	3.2
c. Sensor Control	3.3
d. HARM Sequence	3.8
e. Radar Elevation	3.8

A/G Mode

a. TDC	2.4
b. Chaff/Flare Disp.	3.2
c. Sensor Control	3.3
d. HARM Sequence	3.4
e. Radar elevation	5.0

EW Mode

a. Chaff/Flare Disp.	2.9
b. HARM Sequence	4.1
c. TDC	4.8
d. Sensor Control	5.3

Ranking over all modes

a. TDC	3.4	d. Sensor Control	4.3
b. Chaff/Flare Disp.	3.5	e. Radar Elevation	5.2
c. HARM Sequence	3.9		

11. A/A Master Mode Rankings (Scale of 5 = high to 1 = low)

<u>Difficulty</u>		<u>Frequency</u>	<u>Practice</u>	
TDC	3.5	Communications	4.7	TDC
Radar Elev.	3.3	A/A Weapon Sel.	4.5	Chaff/Flare
HARM Seq.	2.8	TDC	4.4	Radar Elev.
Sensor Cont.	2.6	Sensor Control	4.0	HARM Seq.
Chaff/Flare	2.5	Radar Elev.	3.5	Sensor Cont.

12. A/G Master Mode Rankings (Scale of 5 = high to 1 = low)

<u>Difficulty</u>		<u>Frequency</u>	<u>Practice</u>	
TDC	3.4	Communications	4.7	TDC
HARM Seq.	2.9	TDC	3.9	Chaff/Flare
Chaff/Flare	2.7	A/G Weapon Sel.	3.6	HARM Seq.
Radar Elev.	2.4	Sensor Cont.	3.5	Sensor Cont.
Sensor Cont.	2.2	A/A Weapon Sel.	3.4	Radar Elev.

13. Most critical controls/displays in an EW environment

<u>Controls</u>	<u>A/A Mode</u>	<u>A/G Mode</u>
a. Chaff/Flare Dispenser	7	6
b. Radar Elevation	5	-
c. HARM Seq./FLIR FOV/Raid	4	7
d. Throttle Designator Control	3	2
e. Weapon Select	3	-
f. Weapon Release	-	2

<u>Displays</u>	<u>A/A Mode</u>	<u>A/G Mode</u>
a. ALR-67	12	11
b. HUD displays	7	9
c. Radar displays	5	3
d. EW displays	4	4
e. ALQ-126	4	5
f. HARM displays	3	3
g. ALR-39	2	2
h. Stores displays	2	2

14. Most frequently used radar modes during A/A operations  
(Scale of 1 = always used to 3 = rarely used)

a. Single Target Track (STT)	1.0
b. Range While Search (RWS)	1.2
c. Non-Cooperative Target Recognition (NCTR)	1.3
d. ACM Boresight (BST)	1.4
e. Auto Acquisition (AACQ)	1.4

15. Most frequently used FLIR modes during A/A operations  
(Scale of 1 = always used to 3 = rarely used)

a. Velocity vector Slaved (VVSLV)	1.5
b. Radar LOS Slaved (RSLV)	1.5
c. FLIR Auto Track	1.6

16. Most frequently used radar modes during A/G operations  
(Scale of 1 = always used to 3 = rarely used)

a. Doppler Beam Sharpened Patch (EXP2)	1.3
b. Air-to-Ground Ranging (AGR)	1.3
c. Real Beam Ground Map (MAP)	1.5
d. Medium Resolution Synthetic Aperture (EXP3)	1.7
e. Doppler Beam Sharpened Sector (EXP1)	1.7

17. Skills that may deteriorate with lack of use

a. Throttle Designator Control operations	10
b. A/A, A/G and general FLIR operations	9
c. A/A targeting, radar setups	8
d. HARM/SHRIKE/WALLEYE delivery	7
e. Use of the Radar Elevation Switch	6
f. Use of the Weapon Select Switch	4
g. Use of the Chaff/Flare Dispenser Switch	4

18. HOTAS functions that should be required in trainer

a. HARM/WALLEYE delivery	14
b. A/A targeting/radar sorting	8
c. A/A missions against all types of bogeys	7
d. FLIR sequences	5
e. A/G weapons sequences/maneuvers	3

19. Would a 15C13 type trainer be acceptable?

Yes, but only with major added capability

12

No because:

7

- a. Too simple, canned or perfect
- b. Should be an OFT or WTT
- c. Not all controls work
- d. No visual displays
- e. No HARM, FLIR, etc. capability
- f. No A/G, EW capability

20. Most difficult mission scenarios

- a. Self escorted, low altitude mission into a high threat (hostile air, SAM and AAA) environment with HARM/EW capability on board
- b. Ability to perform FLIR operations
- c. A/A missions against smart A/A threats

**PART III**  
**QUESTIONNAIRE DATA SUMMARY**  
**RESPONSE PERCENTAGES**

This part of the data summary cites the results of 12 survey items expressed in percentages of the pilots responding to the items.

## 1. QUESTION 1: Master modes causing greatest difficulty

a. A/A - 53% A/G - 42% NAV - 5%

## 2. QUESTION 2: Master Modes considered most complex

### 3. QUESTION 3: HOTAS controls/modes considered most important

- a. Throttle Designator Controller (TDC) 90%
- b. Air-to-Air Weapon Select 70%
- c. Sensor Control 50%
- d. Gun/Missile Trigger 44%

4. **QUESTION 4: HOTAS controls requiring most practice**

a.	Throttle Designator Controller	90%
b.	Sensor Control	70%
c.	Radar Elevation	65%
d.	Air-to-Air Weapon Select	50%
e.	Chaff/Flare Dispenser	45%

5. QUESTION 5: Controls/modes most difficult to set correctly

THROTTLES

	NAV	A/A	A/G	EW
a. Chaff/Flare Dispenser	11%	33%	28%	28%
b. Communications	-	-	-	-
c. Cage/Uncage	-	22%	11%	17%
d. Speed Brake	-	-	-	-
e. Throttle Designator Control (TDC)	22%	72%	61%	22%
f. Automatic Throttle Control (ATC)	5%	-	-	-
g. HARM Sequence/FLIR FOV/RAID	11%	17%	67%	28%
h. Exterior Lights	-	-	-	-
i. Radar Elevation	5%	55%	17%	-

CONTROL STICK

	NAV	A/A	A/G	EW
a. Air-to-Air Weapon Select	-	22%	-	-
b. Pitch and Roll Trim	5%	-	-	-
c. Sensor Control	-	39%	39%	5%
d. A/G Weapon Release	-	-	17%	-
e. Gun/Missile Trigger	-	11%	5%	-
f. Baro. Alt. Reset/Undesignate/NWS	-	11%	5%	-
g. Auto Pilot/NWS Disc./G-Limiter OR	5%	17%	5%	5%

6. QUESTION 10: Controls requiring continuous practice to maintain proficiency (Scale of 1 = most to 9 = least)

THROTTLES

Chaff/Flare Dispenser

	1	2	3	4	5	6	7	8	9
a. NAV	20%	20%	-	10%	10%	-	-	10%	30%

k. Track While Scan (TWS)	10%	75%	15%
l. Velocity Search (VS)	-	15%	85%

QUESTION 14 (Continued)

11. QUESTION 15: Identify the frequency of use of the FLIR modes when integrated with radar available in the A/A Master Mode

<u>Mode</u>	<u>Always</u>	<u>Sometimes</u>	<u>Rarely</u>
a. Velocity Vector Slaved (VVSLV)	50%	50%	-
b. Radar LOS Slaved (RRSLV)	50%	50%	-
c. FLIR Autotrack	44%	50%	6%
d. Radar Offset LOS Slaved	6%	38%	56%
e. Inertial LOS Slaved	6%	25%	69%

Note: Four pilots indicated they had never used FLIR.

12. QUESTION 16: Identify the frequency of use of the FLIR modes when integrated with the radar available in the A/G Master Mode

<u>Mode</u>	<u>Always</u>	<u>Sometimes</u>	<u>Rarely</u>
a. Doppler Beam Sharpened Patch (EXP2)	65%	35%	-
b. Air-to-Ground Ranging (AGR)	65%	30%	-
c. Real Beam Ground Map (MAP)	50%	40%	10%
d. Doppler Beam Sharpened Sector EXP1)	35%	50%	15%
e. Medium Res. Syn. Aperture (EXP 3)	35%	50%	15%
f. Sea Surface Search (SEA)	26%	53%	21%
g. Ground Moving Target (GMT)	10%	60%	30%
h. Precision Velocity Update (PVU)	10%	35%	55%
i. Terrain Avoidance (TA)	-	5%	95%

13. QUESTION 17: Identify the pilot skills most likely to deteriorate with lack of practice.

a. Throttle Designator Control operations	50%
b. A/A, A/G and general FLIR operations	45%
c. A/A targeting, radar setups	40%
d. HARM/SHRIKE/WALLEYE delivery	35%
e. Use of the Radar Elevation Switch	30%
f. Use of the Weapon Select Switch	20%
g. Use of the Chaff/Flare Dispenser Switch	20%

14. QUESTION 18: What training capabilities should be required of a HOTAS deployable part task trainer?

a. HARM/WALLEYE delivery	70%
b. A/A targeting/radar sorting	40%
c. A/A missions against all types of bogeys	35%
d. FLIR sequences	25%
e. A/G weapons sequences/maneuvers	25%

NUMBER	TASK	CONDITIONS	CONTROLS/DISPLAYS/INDICATORS		SIMULATION REQUIREMENTS	PRIORITY
			DDI - Radar Display	RWR - Visual Indications		
3.2.6.1.1	Identify SAM threat via cockpit visual cues	SAM threats received	DDI - Radar Display	RWR - Visual Indications	SAM threat environment	1
3.2.6.1.2	Identify SAM threat via cockpit aural cues	Sim/Aircraft Airborne; aural SAM threat cues received	RWR - Aural indications	Pilot Headset		1
3.2.6.1.3	Identify SAM threat via external visual cues	Sim/Aircraft Airborne; visual SAM threat cues received; SAM threat in sight			visual SAM threat environment	1
3.2.6.2	Respond to SAM threat	Sim/Aircraft Airborne; in threat environment with visual and/or aural SAM threat cues received				1
3.2.6.2.1	Select Counter tactics	Sim/Aircraft Airborne; SAM threat in sight or direction/proximity identified by visual and aural SAM threat cues.	DDI - Radar Display	RWR - Visual and aural indications	visual SAM threat environment	1
3.2.6.2.2	Perform Counter to SAM threat	Evasive aircraft maneuvers	DDI - Radar Display	RWR - Visual and aural indications		1
3.2.6.2.2.1	Perform ECM	Sim/Aircraft Airborne; equipped with Chaff/Flare equipment	Control Indicator	Azimuth Indicator	Flare/Chaff Switch on throttle	1
3.2.6.2.2.2	Dispense Chaff/Flares		Dispenser/ECM Control Panel	Master Arm Switch		1

NUMBER	TASK	CONDITIONS	CONTROLS/DISPLAYS/INDICATORS	SIMULATION REQUIREMENTS	PRIORITY
3.2.6.2.2.3	Perform HARM delivery	Sim/Aircraft Airborne; equipped with operational HARM missiles	DDI - HARM display HUD - HARM display	SAM site environment	High
3.2.6.2.2.3.1	Perform Self Protect/Pullback				
	HARM delivery				
	See task: 1.5.8				
3.2.6.2.2.4	Assess results of counter to SAM threat
